

Diagnosis Groups and Their Distribution

The hospital system tracks **10 distinct diagnosis groups**, with Infectious Disease accounting for the largest share of admissions at over a quarter of all cases.

Distribution Overview

The diagnosis groups span across 8,000 total admissions, with the following distribution:

Top Three Groups:

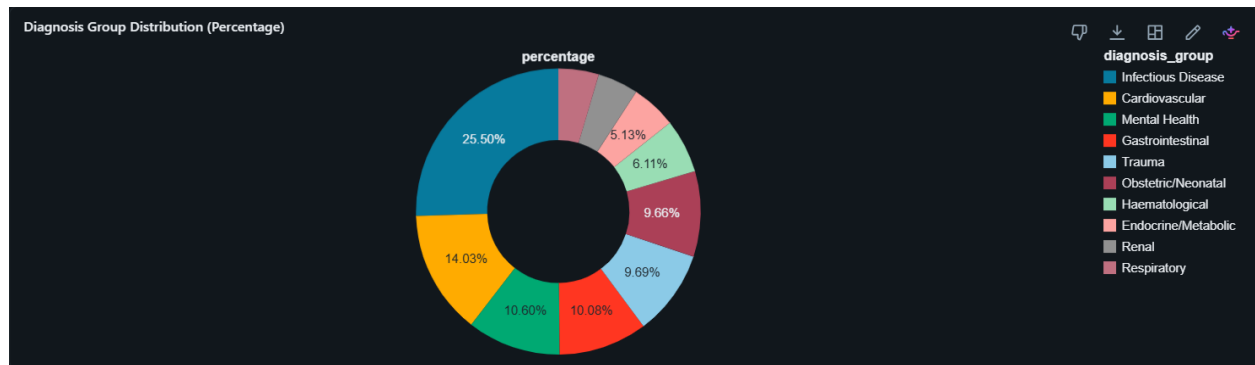

- **Infectious Disease** leads with 2,041 admissions (25.51%), containing 5 unique diagnoses including HIV/AIDS and Tuberculosis
- **Cardiovascular** follows with 1,122 admissions (14.03%), covering 3 distinct diagnoses
- **Mental Health** accounts for 848 admissions (10.60%), with 2 diagnoses including Depression and Schizophrenia

Mid-Tier Groups:

- Gastrointestinal: 806 admissions (10.08%)
- Trauma: 775 admissions (9.69%)
- Obstetric/Neonatal: 773 admissions (9.66%)

Smaller Groups:

- Haematological: 489 admissions (6.11%)
- Endocrine/Metabolic: 410 admissions (5.13%)
- Renal: 370 admissions (4.63%)
- Respiratory: 366 admissions (4.58%)

The distribution shows a concentration in infectious disease and cardiovascular conditions, which together represent nearly 40% of all hospital admissions, while the remaining eight groups are more evenly distributed across the other 60% of cases.
